

Archaeologists Assim, Emma and James are digging at a Roman site, but unfortunately, their finds trays have been mixed up!

Can you use their statements to work out which archaeologist found each artefact, and which tray it should be in? Fill in the grid to show where the objects should go. You can only use each artefact once, and only one item per person can go into each tray.

You can find some information about each artefact the archaeologists found online at englishheritage.org.uk/kids-archaeology-digs

Archaeologists carry out excavations to collect information about what was happening in the past. This can include soil samples, environmental data, human and animal bone and human-made artefacts.

Calling all young Archaeologists

Three artefacts are still in the right trays, so these have been added to the grid to start you off.

Emma remembers finding two items of jewellery (a brooch and a gold ring) and a gaming piece.

Emma is certain that she didn't find any pots or pot sherds.

Assim put the Roman nail next to the gaming piece that was in tray 3.

The brooch, stylus and dice were all in tray 2.

James found a pot sherd, a face pot, a pair of dice and a bottle top.

The pot sherd and the tessera were both in tray 1.
